

BREAD OATH

The Bread Oath is a low-mid gain, opamp-based overdrive, designed to push your amp into breakup and sprinkle in some clipping harmonics of its own. The Bread Oath features both Silicon and Germanium clipping modes as well as a secondary pre-gain stage for those parts where you need to go in hard.

VOL

Controls the output volume of the pedal.

GAIN

Controls the amount of amplification from the clipping stage.

PRE

Controls the amount of gain from the preamp stage, before the clipping stage.

TONE

Rolls off the amount of treble going into the clipping stage, after the preamp stage.

PRE SWITCH

Toggles the preamp stage.

BYP SWITCH

Toggles the bypass for the entire pedal. The preamp stage is also bypassed when the effect is off.
